Reasons for not endorsing central venous access device guidelines

- Not freely available in a journal or on a website
- Not highly relevant to cancer nursing practice
- Not central venous access device focussed/ not enough detail
- Too narrow a focus
- Not nursing focussed
- Out of date/ Evidence out of date
- No description of review process e.g. search strategy, funding
- Other guidelines provide better and/or more recent information (better alternatives available)
- Superseded by other guidelines
- Content available elsewhere

Disclaimer

This document has been developed by the Cancer Nurses Society of Australia Central Venous Access Device Working Party, an expert working party comprising members of the Cancer Nurses Society of Australia (CNSA). The information in this document is presented by the CNSA for the purposes of disseminating information for the benefit of nurses working in cancer care. While the CNSA has exercised due care in ensuring the accuracy of the material contained within this document, knowledge is constantly changing and the CNSA does not accept any liability for any injury, loss or damage incurred by use of, or reliance on the information provided within this document. It is the responsibility of the health care practitioner, relying on current evidence and clinical knowledge of the patient to determine the best treatment for an individual patient. Description of products does not indicate or imply endorsement by CNSA. CNSA has no financial interest with the manufacturers of any products mentioned in this document. This resource will be due for update in 2018 and should not be considered current after this time.
